

# CURE IT<sup>®</sup>

GRP WATERPROOFING SYSTEM

**EXTRA COLD  
RESIN & TOPCOAT  
HAS ARRIVED!**

**DOWNLOAD THE CURE IT APP  
FOR INSTALLATION DETAILS**

## SUITABLE FOR USE IN TEMPERATURES DOWN TO 0°C

Our range of 'Extra Cold' resins and topcoats will provide the same performance as the standard Cure It roofing system but at a much lower operating temperature between 10°C and 0°C.

Our new Extra Cold Resin will cure when the resin, the boards and the ambient temperature are right down at 0°C! We've also adapted the handling characteristics so that the resin has the same 'feel' as you would expect at 12°C.

This means you can be confident of roofing right through the Winter chill.

**Technical tip:** It is good practice to keep the standard resins and topcoats warm the night before use (sealed cans kept near a radiator if possible.) The resin/topcoat will take a long time to lose the heat put into them and at low temperatures every degree helps to extend their usable temperature range.

### Hardener use for Cure It 'Extra Cold'

Temp.	Hardener addition
10°C and below ('hot' guide on the mixing bucket)	1%
7°C and below ('warm' guide on the mixing bucket)	2%
5°C to 0°C ('cold' guide on the mixing bucket)	4%
